3. REVIEW OF CONTINGENCY PLANS.....	9

1. INTRODUCTION

The prompt and efficient response to incidents and disasters leads to the saving of lives and protection of property, without which there would be unprecedented human and economical losses. Disaster Risk Management, being a multi-sectoral and multi-disciplinary process of planning and implementation, calls for an integrated approach to disaster management by different role players. Captured in this document is the flood hazard that has become prevalent in the province and the specific response role that each stakeholder plays. The aim of this exercise is to prevent uncertainty, confusion and duplication of roles in the event of response to disasters. A flood is an overflow of an expanse of water that submerges land. Floods can also occur in rivers, when flow exceeds the capacity of the river channel, particularly at bends or meanders (Wikipedia, 2011)

1.1 CAUSES AND EFFECTS OF FLOODS

Floods can be attributed to seasonal weather conditions, among other causes. Impacts of floods are often detrimental to environmental, economic and social sectors. Long and short, tangible and intangible impacts of floods can never be taken for granted. It is for these reasons that Contingency Plans should be put in place to prepare for, mitigate and respond to flood disasters.

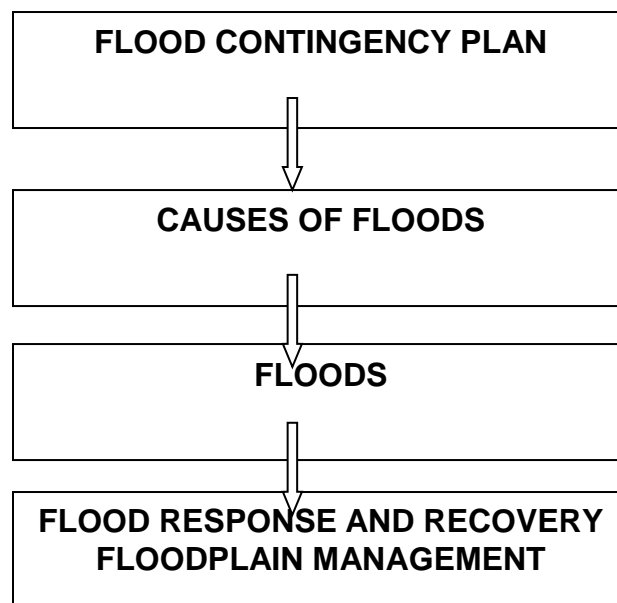

Figure 1. Contents of a Flood Contingency Plan

2. ROLES AND RESPONSIBILITIES OF RESPONSE ROLE PLAYERS

A Flood Contingency Plan reinforces and establishes response activities and assigns responsibilities to various response role players.

ROLES	RESPONSE ROLE PLAYERS	CONTACT DETAILS
Flood Warnings to Disaster Managers, homes and businesses. 3. REVIEW OF ONTINGENCY PLANS

Spheres of Government and Departments must ensure that the plans are updated when there is a need, but in any event reviewed annually as part of the flood safety risk assessment exercise.
